Trey Mouledoux *(Donald Mouledoux)*

SOFTWARE DEVELOPER · COMPUTER SCIENCE UNDERGRADUATE

Nashville, TN

treymouledoux.me | github.com/treymouledoux | linkedin.com/in/trey-mouledoux

SUMMARY

Software developer and computer science undergraduate who started building well before college. Fluent in Rust, Python, C++, Go, and JavaScript, with shipped open-source work ranging from a logging library with over 26,000 downloads to a from-scratch interpreted language. Four years of teaching kids to code built a knack for explaining technical ideas clearly, and three years of competitive cyber defense laid a solid security foundation. Currently debugging and evaluating AI-generated code as a contract engineer at DataAnnotation.

EDUCATION & HIGHLIGHTS

EDUCATION

Middle Tennessee State University
B.S. in Computer Science
Concentration: Cybersecurity
Murfreesboro, TN · 2026 to 2030 (expected)

Activities: ISA Cyber Club, Member

HIGHLIGHTS

- Self-taught across 7+ languages and multiple paradigms
- Designed and built an interpreted programming language
- Run a homelab, self-hosting services in real use

EXPERIENCE

Software Engineer, AI Training (Contract) · DataAnnotation · Remote — 2026 to Present

- Write and debug code alongside frontier AI models on real programming tasks, pinpointing where the generated code fails and explaining why in written feedback used to train the models.
- Evaluate agentic coding sessions where models use tools and edit files, judging whether their changes actually solve the task.
- Rate and compare AI responses for helpfulness, honesty, and accuracy, flagging hallucinations such as fabricated sources.

Code Sensei · Code Ninjas · Franklin, TN — 2022 to 2026

- Taught JavaScript, Lua, and introductory AI concepts to young students through a structured coding curriculum.
- Broke down technical ideas for beginners with no coding background, adapting each explanation to the student's level.
- Completed the program as a student before returning as an instructor, strengthening core fundamentals by teaching them.

Competitor · CyberPatriot: National Youth Cyber Education Program · Franklin, TN — 2023 to 2025

- Secured Windows, Linux, and Windows Server systems against vulnerabilities in timed, competitive rounds.
- Divided and coordinated fixes with teammates across multiple operating systems.
- Scored on how thoroughly each system was locked down, building sharp security instincts and fast, methodical troubleshooting.

SKILLS

Languages	Rust, Python, JavaScript / TypeScript, C++, Go, Nim, Lua, and more
Tools & Systems	Linux, Git & GitHub, CLI tooling
Focus Areas	Systems programming, cybersecurity and system hardening, automation, language design
